> Notice of Ex parte regarding: WC Docket Nos. 10-90, 07-135, 05-337 and 03-109, GN Docket No. 09-51 and CC Docket Nos. 01-92 and 96-45 in the matter of Connect America Fund, a National Broadband Plan for Our Future, Establishing Just and Reasonable Rates for Local Exchange Carriers, High-cost Universal Support, developing a Unified Intercarrier Compensation Regime, federal-State Joint Board on Universal Service, Lifeline and Link-up
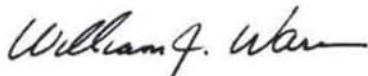

Dear Ms Dortch:

On September 21, 2011, Archie Macias of Wheat State Telephone Company, and Stuart Polikoff and Brian Ford of The Organization for the Promotion and Advancement of Small Telecommunication Companies (OPASTCO), met with the following members of the Federal Communications Commission's (FCC) Wireline Competition Bureau, Carol Mattey, Amy Bender, Al Lewis, Katie King, Doug Slotten, Gary Seigel, and Patrick Halley to discuss the FCC's pending universal service and inter-carrier compensation notice of proposed rulemaking in the referenced dockets. The discussion was both in general and how the proposed Rural Local Exchange Carrier (RLEC) plan and the American Broadband Connectivity (ABC) plan would impact Wheat State specifically.

Wheat State previously filed comments on April 18, 2011 in the mentioned dockets and on July 12, 2010 in the additional WC Docket Nos. 10-90 and 05-337, and GN Docket 09-51. Wheat State also participated in an ex parte meeting with the FCC on June 24, 2011.

Archie Macias presented a comparison of the impact of the proposed Connect America Fund (CAF) and ICC reform transition steps in the RLEC's plan versus the current Universal Service Fund support under FCC rules. Information was also provided that supported the fact that Kansas established a Kansas Universal Service Fund and statewide average local rates fifteen years ago, and that Kansas's approved intrastate access charges are in parity with interstate access charges.

On behalf of Wheat State Telephone Company and pursuant to Section 1.1206(b) of the Commission's rules, a redacted version of this submission is filed for inclusion in the public record of the referenced proceeding.

Sincerely,

William J. Warinner

William J. Warinner, Partner

PRELIMINARY RLEC CAF COMPUTATION
STUDY AREA CALCULATION TEMPLATE
VERSION 2.0 - JULY 2Q 2011
Assumes 10% Authorized ROR Over 12 Year Transition

WORK IN PROGRESS
DRAFT ONLY

Wheat State Telephone Company, Inc **10% Interstate ROR & Corp Ops Cap** **REDACTED VERSION**	FYI 2009	Base Year 2010	Exclude 2011	Year 1 2012	Year 2 2013	Year 3 2014	Year 4 2015	Year 5 2016	Year 6 2017	Year 7 2018	Year 8 2019

Data Inputs Instructions:

1 Amounts in shaded cells are for input and should reflect best estimates of study area specific operations and growth characteristics. Base year amounts and current support should be calculated at 11.25% ROR; Year 1 to 8

2 Interstate Revenue requirement (RRQ) amounts = sum of CL, SW, SP (excl DSL) and DSL RRQ and include the USF high cost loop corporate operations expense limitation and a 10% capital expenditure limitation. Default

3 Special Access RRQ includes the DSL Access Service Connection Point (DSL ASCP) and the interconnection between the DSL ASCP and the ISP.

4 DSL RRQ includes NIDs, INIDs (up to 50% allocation), DSLAMs, Fiber To The Premise (FTTP) Optical Line Terminal (up to 50% allocation), FTTP Optical Network Terminals (up to 50% allocation), second mile

5 Intrastate Revenue requirement (RRQ) amount = State/Local RRQ from Part 36 allocation

6 Middle mile RRQ should be actual or estimated amounts for the costs of broadband transmission beyond the DSL connection point to the Internet backbone.
Default estimated amounts = $5.34 x broadband lines x 12. Note that $5.34 is based on NECA pool average. Substitute with more accurate company-specific middle mile cost per line.

7 Counts of "Naked DSL" lines should be included in both Access Lines and DSL Lines. Broadband take rate = DSL Lines/Total Access Lines. If broadband take rate is less than 25%, enter 25%.
Broadband take rate cannot exceed 100% by definition.

8 SLC revenues are to be based on currently effective subscriber line charges applied according to current FCC access charge rules.

9 Additional Loop Costs based on broadband take rate have been calculated by comparing the "before" (i.e., current 25% gross allocator) and "after" (i.e., gross allocator = broadband take rate) results of allocator model runs.

10 Broadband RRQ represents last mile, second mile, middle mile and related Internet connection costs for working broadband lines (ADSL and naked DSL) and is calculated as: (CLRRQ x broadband take rate) + Transitioned

11 Local Switching Support, High Cost Loop Support, Interstate Common Line Support, Safety Net Additive and Safety Valve Support are to be calculated or estimated according to current rules.

12 Study area benchmark is comprised of a fixed non-line component starting at $19.25 in year 1 increasing for all study areas to $24.75 in year 8, plus a study area variable line component that is based on the study area's

Calculations:

Ln Description
1 Revenue Requirement (Total Co., Interstate and Intrastate) = value from Data Inputs
2 Middle mile RRQ = value from Data Inputs
3 Add'l Loop Costs based on Broadband Allocation Factor (study area increase above current 25%); transitional impact over 12 years, i.e., increase loop allocation 1/12 each year.
4a Broadband transmission component = (Broadband RRQ per broadband line per month - study area benchmark) x broadband lines x 12 to annualize; broadband lines assumed to equal DSL lines
   Broadband RRQ per broadband line (per month) = (last mile + second mile + middle mile) / DSL lines / 12
      Last mile = (CL RRQ x take rate) + Transitioned Additional Loop Costs; Second mile = DSL RRQ; Middle mile = Middle Mile RRQ
   Study area benchmark is calculated using Data Inputs
4b Current LSS ; limited to total Local Switching revenue requirement
4c Calculated using voice-only components of CL revenue requirement and SLC revenues = (CL RRQ x (1-broadband take rate)) - (SLC Revenues x (1-broadband take rate))
5 Sum of lines 1 to 3 minus sum of lines 4a to 4c
6 Adjusted Intrastate RRQ = Line 1b - Line 3
7 Grandfathered support = difference between the amount of HCL+SNA+SV support and Transitioned Additional Loop Costs (Ln 3) included in Broadband Transmission Component (Ln 4a)

Preliminary RLEC CAF Computation
Study Area Calculation Template
Version 2.0 - July 20, 2011
Assumes 10% Authorized ROR and 12-year transition

WORK IN PROGRESS
DRAFT ONLY

	FYI	Base Year	Exclude	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8
Wheat State Telephone Company, Inc	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
FTTH Base - 11.25% Interstate ROR											
REDACTED VERSION											

> **CONFIDENTIAL INFORMATION - SUBJECT TO PROTECTIVE ORDER IN CC DOCKET NO. 01-92, WC DOCKETS**
> **NOS. 05-337, 07-135 and 10-90 AND GN DOCKET NO. 09-51 BEFORE THE FEDERAL COMMUNICATION COMMISSION**

1. Amounts in shaded cells are for input and should reflect best estimates of study area specific operations and growth characteristics. Base year amounts and current support should be calculated at 11.25% ROR; Year 1 to 8 revenue requirements and proposed support should be calculated at 10% ROR. Amounts can either be entered in each cell or calculated by applying company-specific growth percentages in cell calculations. NOTE: none of the cells have been "protected", giving you the opportunity to do other "what-if" calculations on the preliminary RLEC CAF computations. However, doing so will produce results different from the main CAF model.

2. Interstate Revenue requirement (RRQ) amounts = sum of CL, SW, SP (excl DSL) and DSL RRQ and include the USF high cost loop corporate operations expense limitation and a 10% capital expenditure limitation. Default average annual growth projections: CL RRQ=+2.2%; SW RRQ = -3.0%; SP RRQ (incl. DSL) = +4.9%; LS RRQ = -3.3%; LSS = -4.2%; SLC revs = -4.7%

3. Special Access RRQ includes the DSL Access Service Connection Point (DSL ASCP) and the interconnection between the DSL ASCP and the ISP.

4.

DSL RRQ includes NIDs, INIDs (up to 50% allocation), DSLAMs, Fiber To The Premise (FTTP) Optical Line Terminal (up to 50% allocation), FTTP Optical Network Terminals (up to 50% allocation), second mile transmission equipment and facilities, ILEC broadband aggregation equipment (not including the DSL ASCP), and in the case of naked DSL, the loop cost. Second mile costs are included in the DSL RRQ.

5. Intrastate Revenue requirement (RRQ) amount = State/Local RRQ from Part 36 allocation

6. Middle mile RRQ should be actual or estimated amounts for the costs of broadband transmission beyond the DSL connection point to the Internet backbone.
Default estimated amounts = $5.34 x broadband lines x 12. Note that $5.34 is based on NECA pool average. Substitute with more accurate company-specific middle mile cost per line.

7. Counts of "Naked DSL" lines should be included in both Access Lines and DSL Lines. Broadband take rate = DSL Lines/Total Access Lines. If broadband take rate is less than 25%, enter 25%. Broadband take rate cannot exceed 100% by definition.

8. SLC revenues are to be based on currently effective subscriber line charges applied according to current FCC access charge rules.

9. Additional Loop Costs based on broadband take rate have been calculated by comparing the "before" (i.e., current 25% gross allocator) and "after" (i.e., gross allocator = broadband take rate) results of allocator model runs. Additional loop costs are calculated to be the difference in the resulting Common Line RRQ amounts.

10. Broadband RRQ represents last mile, second mile, middle mile and related Internet connection costs for working broadband lines (ADSL and naked DSL) and is calculated as: (CLRRQ x broadband take rate) + Transitioned Additional Loop Costs + Second mile (DSL RRQ)+ Middle Mile costs

11. Local Switching Support, High Cost Loop Support, Interstate Common Line Support, Safety Net Additive and Safety Valve Support are to be calculated or estimated according to current rules.

12. Study area benchmark is comprised of a fixed non-line component starting at $19.25 in year 1 increasing for all study areas to $24.75 in year 8, plus a study area variable line component that is based on the study area's take rate, eg. Line component at 25% take rate = $6.50, at 50% take rate = $13.00, at 75% take rate = $19.50 transitioned over 12 year period. For example, if year 1 take rate is 50%, year 1 variable line component would be $6.50 plus 1/12 of additional $6.50 = $6.50 + $0.54 = $7.15; total year 1 benchmark would be $19.25 + $7.15 = $26.40.

Calculations:

Ln Description
1. Revenue Requirement (Total Co., Interstate and Intrastate) = value from Data Inputs
2. Middle mile RRQ = value from Data Inputs
3. Add'l Loop Costs based on Broadband Allocation Factor (study area increase above current 25%); transitional impact over 12 years, i.e., increase loop allocation 1/12 each year.
4a. Broadband transmission component = (Broadband RRQ per broadband line per month - study area benchmark) x broadband lines x 12 to annualize; broadband lines assumed to equal DSL lines
   Broadband RRQ per broadband line (per month) = (last mile + second mile + middle mile) / DSL lines / 12
     Last mile = (CL RRQ x take rate) + Transitioned Additional Loop Costs; Second mile = DSL RRQ; Middle mile = Middle Mile RRQ
   Study area benchmark is calculated using Data Inputs
4b. Current LSS ; limited to total Local Switching revenue requirement
4c. Calculated using voice-only components of CL revenue requirement and SLC revenues = (CL RRQ x (1-broadband take rate)) - (SLC Revenues x (1-broadband take rate))
5. Sum of lines 1 to 3 minus sum of lines 4a to 4c
6. Adjusted Intrastate RRQ = Line 1b - Line 3
7. Grandfathered support = difference between the amount of HCL+SNA+SV support and Transitioned Additional Loop Costs (Ln 3) included in Broadband Transmission Component (Ln 4a)

Notes:

* MOUs are July 2011, annualized; reciprocal compensation are August 2011

Originating remains at current rates.

Interstate MOUs are going down; future payment for VoIP MOUs are shown with 8% loss of MOUs rather than 13%

Lost Interstate revenue part of RM.

Lost Intrastate revenue part of RM, subject to a 10% earnings test

Lost Reciprocal Compensation revenue part of RM.

K.	FCC	FCC Constant (see Part 36.621 (a)(4)(ii)(C))						
L.	CS input 762	GDP-CPI (varies yearly)						
Step 1: Calculate Total Reported Corporate Operations Expense per loop per month								
M.	(A+B)/C/12	Total Reported Corporate Operations Expense per loop per month	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!
Step 2: Calculate Total Allowed Corporate Operations Expense per loop per month								
N.	(E-F*D)*L	Total Allowed Corporate Operations Expense per loop per month when the number of working loops is less than or equal to 6,000 (Calculation 1)	0	0	0	0	0	0
P.	G/D*L	Total Allowed Corporate Operations Expense per loop per month when the number of working loops is less than or equal to 6,000 (Calculation 2)	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!
Q.	(H+J/D)*L	Total Allowed Corporate Operations Expense per loop per month when the number of working loops is greater than 6,000 but less than 18,006	n/a	n/a	n/a	n/a	n/a	n/a
R.	K*L	Total Allowed Corporate Operations Expense per loop per month when the number of working loops is greater than or equal to 18,006	n/a	n/a	n/a	n/a	n/a	n/a
S.	N,P,Q, or R (see Note #1)	Applicable Total Allowed Corporate Operations Expense per loop per month (chosen from above)	0	0	0	0	0	0
Step 3: Perform Limitation Test								
T.	A+B	Total Reported Corporate Operations Expense	0	0	0	0	0	0
U.	(M,S)*C*12 (see Note #2)	Total (limited) Corporate Operations Expense	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!
V.	T-U	Corporate Operations Expense Disallowed	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!	#DIV/0!

Note #1: The number of working loops determines the applicable Total Allowed Corporate Operations Expense per loop per month. When the number of loops is less than or equal to 6,000, the greater of N and P is selected.

Note #2: The lesser of M or S is used in the calculation.

Wheat State does not qualify for the Corporate operations cap, based on this algorithm.
